1 General / Généralités

BERINGER brakes are made of calipers (single, dual, triple or quad piston) installed on a backplate with a steel disc.

The brakes exist in different versions depending on the following criteria:

- Number of pistons
- Piston diameter
- Vented or non-vented
- Disc thickness
- Disc material
- Backplate drilling pattern (interface to landing gear)
- Hydraulic fluid

This document gathers a description of technology and principle as well as the Illustrated Parts Catalogue (IPC) for each brake assembly.

Les ensembles de frein BERINGER sont constitués d'étriers (simple, double, triple, ou quadruple piston) installé sur un renfort avec un disque en acier.

Les freins existent en différentes versions en fonction des critères ci-dessous :

- *Nombre de pistons*
- *Diamètre de piston*
- *Ventilé ou non-ventilé*
- *Epaisseur du disque*
- *Matériau du disque*
- *Schéma de perçage du renfort (interface au train d'atterrissage)*
- *Liquide hydraulique*

Ce document regroupe une description de la technologie et du principe de fonctionnement des freins ainsi que le Catalogue Illustré des Pièces (IPC) pour chaque ensemble frein.

NOTE

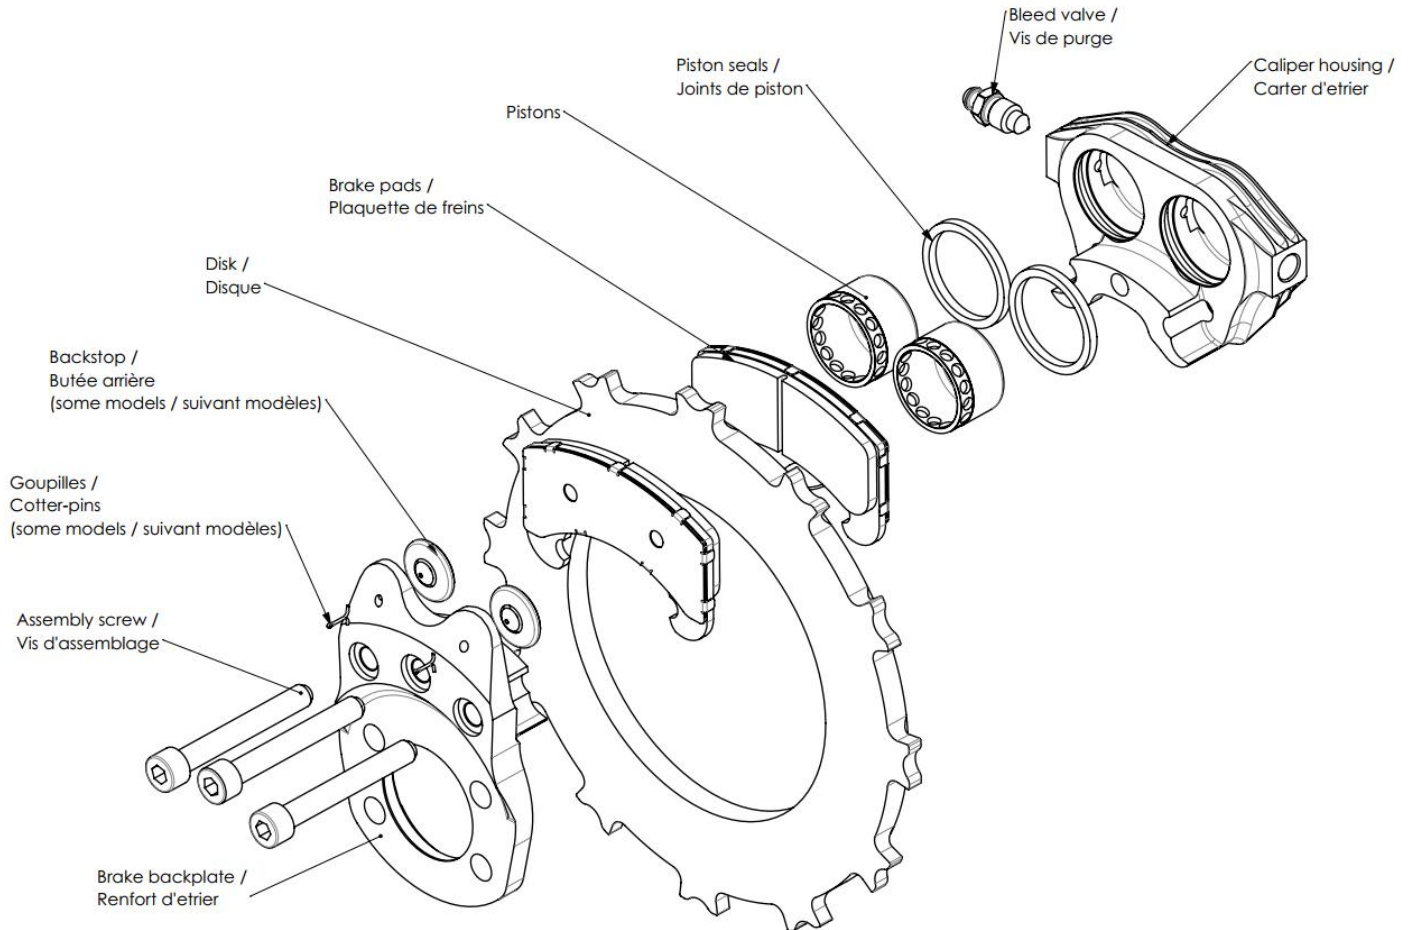

EA-006 and EA-009 brakes have a different design from the rest of the BERINGER range, therefore they will be addressed through specific paragraphs

Les étriers de frein EA-006 et EA-009 ont un design différent du reste de la gamme BERINGER, ils seront donc traités dans des paragraphes spécifiques

2 System Architecture / Architecture du système

Brake assembly is made of a fixed hydraulic caliper fastened on main wheel axle, braking on a floating disc rotated by the rim.

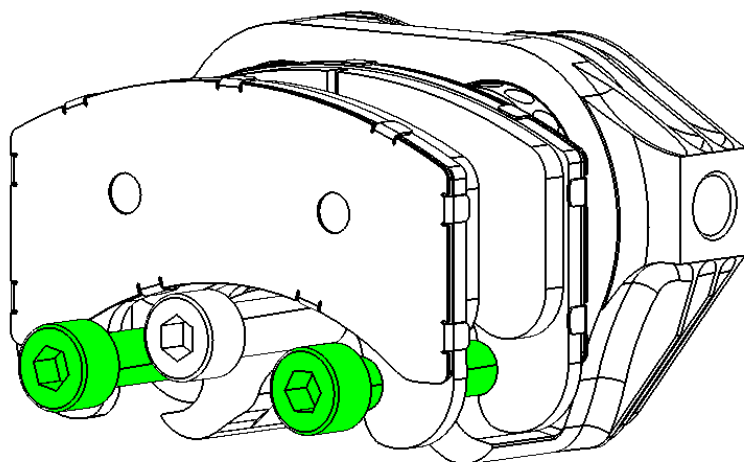

L'ensemble frein est constitué d'un étrier hydraulique fixe attaché à l'axe de roue principale, qui freine sur un disque flottant entraîné par la jante.

3 Brake Pads / *Plaquettes de frein*

Brake pads are actuated by pistons. They slide along the 2 side assembly screws (green on the picture).

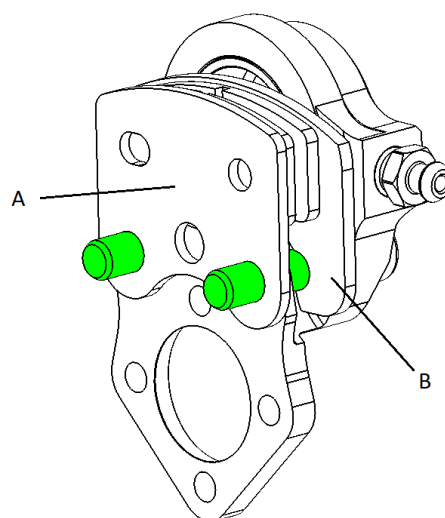

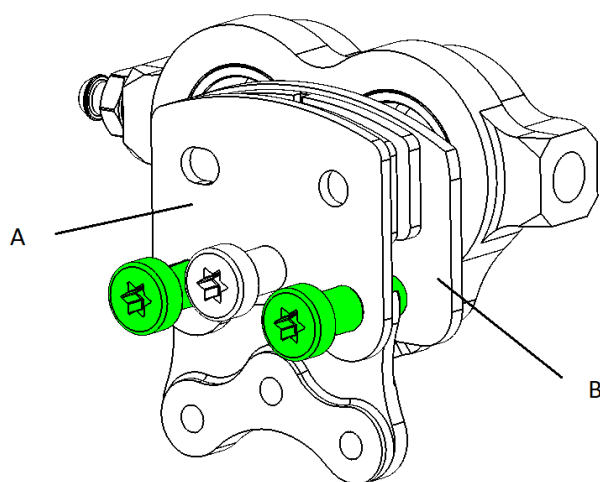

Les plaquettes de frein sont actionnées par les pistons. Elles coulisent le long des 2 vis d'assemblage latérales (vert sur l'image).

Specific case of EA-006 and EA-009

On these brake assembly, one of the pads (A on the pictures) is fixed against the backplate, and the other (B on the pictures) slides along the 2 side assembly screws (green on the pictures).

Sur ces freins, une des plaquettes (A sur les images) est montée fixe contre le renfort d'étrier, et l'autre (B sur les images) coulisse le long des 2 vis d'assemblage latérales (vert sur l'image).

4 Important Notice / Avertissement

- Brake fluid must be chosen and replaced as per Working Card **MM-00-003** to ensure brake performance
*Le fluide hydraulique doit être choisi et remplacé suivant la Carte de Travail **MM-00-003** pour assurer la performance des freins*
- Brake system must be properly bled as per Working Card **MM-00-003** to ensure a powerful, reliable and good-feeling braking
*Le circuit de frein doit être purgé correctement suivant la Carte de Travail **MM-00-003** pour garantir un freinage puissant fiable et progressif*
- Brake discs and pads must be properly conditioned as per Working Card **MM-01-002** to avoid damage on both disc and pads leading to lower braking performance
*Les disques et plaquettes de frein doivent être rodés correctement suivant la Carte de Travail **MM-01-002** pour éviter d'endommager les disques et les plaquettes et entraîner une performance de freinage plus faible*

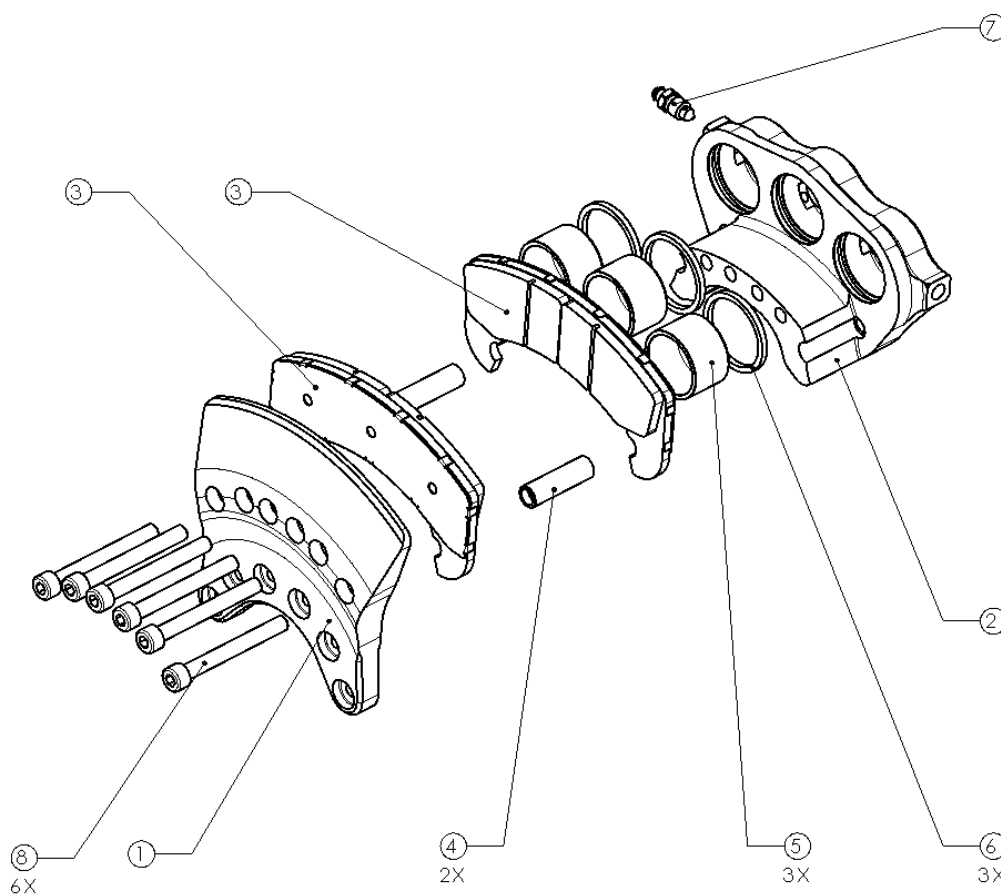

5 IPC - Illustrated Parts Catalogue / *Catalogue Illustré des Pièces*

NOTE: Products referenced with * are not produced by BERINGER anymore. Les produits référencés avec une * ne sont plus produits par BERINGER

5.1 EA-001

High-temperature-specific brake pads exist for this brake assembly. Pay attention to choose the right reference in the bill of material.

Des plaquettes spécifiques haute-température existent pour ce bloc frein. Attention à choisir la bonne référence dans la nomenclature
