1 General

BERINGER wheels are all tubeless and based on the same technical principle of 2 wheel-halves screwed together. Different models exist, depending on the following criteria:

- Rim diameter
- Rim width
- Rim load ratings
- Bearing size (interface with the axle)
- Bearing material (standard or stainless steel)
- Brake disk size

Les roues BERINGER sont toutes tubeless et basées sur le même concept technique de 2 demi-jantes vissées ensemble. Il existe différents modèles suivant les critères suivants :

- *Diamètre de jante*
- *Largeur de jante*
- *Résistance nominale de la jante*
- *Taille de roulements (interface avec l'axe)*
- *Matériau des roulements (standard ou inox)*
- *Taille du disque de frein*

2 Principle

BERINGER wheels (main and auxiliary) are tubeless, made of 2 anodized aluminum wheel halves. They are fastened together thanks to assembly screws (number and diameter may vary depending on models). Airtightness is ensured by an O-ring between the wheel halves. Each wheel half comes with a bearing (ball or tapered roller type depending on models). The wheel valve is installed directly on the external wheel half. The interface to the brake disk is ensured by clip-equipped torque-ears on the inner wheel half for main wheels. Some wheels can be fit with a hub cap (picture below).

Les roues BERINGER (principales et auxiliaires) sont tubeless, composées de 2 demi-jantes en aluminium anodisé. Elles sont fixées ensemble par des vis d'assemblage (nombre et diamètre peuvent varier suivant les modèles). L'étanchéité est assurée par un joint torique entre les demi-jantes. Chaque demi-jante comporte un roulement (à bille ou à rouleaux coniques suivant les modèles). La valve de roue est installée sur la demi-jante extérieure. L'interface avec le disque de frein est réalisée par les oreilles de reprise de couple équipées de clips sur la demi-jante intérieure des roues principales. Certaines roues peuvent être équipées d'un bouchon (image ci-dessous).

3 Main wheel / Roue principale

4 Auxiliary wheel / *Roue Auxiliaire*

5 Wheels with captive spacer / *Roues avec entretoise captive*

Some wheels of the BERINGER range come with a spacer inside to simplify the interface with aircraft original axle. Technical concept is the same as standard 2-part wheels.

Certaines roues de la gamme BERINGER comportent une entretoise à l'intérieur pour simplifier l'interface avec l'axe d'origine de l'avion. Le concept technique est le même que les roues en 2 parties standard.

6 Tube-type wheels / *Roues avec chambre à air*

Some wheels of the BERINGER range are compatible with tubes. Technical concept is the same, except there is no airtightness then no O-ring, and no wheel valve.

Certaines roues de la gamme BERINGER sont compatibles avec des chambres à air. Le concept technique est le même sans étanchéité, donc pas de joint torique ni de valve.

7 Screwed wheels / Roues vissées

Some wheels of the BERINGER range are screwed and compatible with tubes. There is no airtightness then no O-ring, and no wheel valve, and the wheel halves are directly screwed one in the other.

Certaines roues de la gamme BERINGER sont vissées et compatibles avec des chambres à air. Il n'y a pas d'étanchéité, donc pas de joint torique ni de valve, et les demi-jantes sont directement vissées l'une dans l'autre.

8 3-parts wheels / Roues en 3 parties

The former BERINGER wheels were made of 3 parts. These wheels were superseded by 2-parts ones. However, principle remains the same, except that the wheel halves are assembled on a central cylindrical spacer, with 2 O-rings, and the wheel valve is bonded in the rim.

Les anciennes roues BERINGER étaient composées de 3 parties. Ces roues ont été remplacées par les roues en 2 parties. Toutefois, le principe est resté le même, à l'exception des demi-jantes qui sont assemblées sur une entretoise centrale cylindrique, et la valve de roue qui est collée à l'intérieur de la jante.
